

Introducing *KRYSAR V*, the latest in guitar amp simulation technology from *KH Effects*! Bringing together years of programming experience and guitar knowhow brings about a new, unique sounding guitar amp that steps on every guitar amp's toes from Marshalls to Voxs to Hovercrafts! Regardless of genre, *KRYSAR V* is well suited for everything from country to metal and everything in-between!

## CONTROLS

**Pre** – controls the gain of the preamp. Turn clockwise for more gain.

**CUT** - low-pass filter for smoothing out fizziness or for adding treble. Turn clockwise for more treble.

**SYM** – clipping symmetry control. Turn clockwise for more symmetrical clipping.

**POST** – controls the power amp volume and gain. Turn clockwise for more gain.

**MASTER** – controls overall volume of this amp simulator. Turn clockwise for more volume.

**SPEED** – controls speed of tremolo effects. Turn clockwise for a faster speed.

**DEPTH** – controls depth of tremolo effect. Turn clockwise for a deeper tremolo effect.

**MIX** – Turn clockwise for more delay in the mix.

**TIME** – Controls the timing of the delay/echo repeats. Turn clockwise for a longer delay time.

**FEEDBACK** – Controls the number of repeats. Turning clockwise increases the number of repeats.
